The Masterpiece for Point-of-Care Ultrasound

Stunning Clarity

- High fidelity, high-channel count architecture results in superb detail resolution, particularly at depth
- Tissue Adaptive Imaging (TAI) continuously and automatically optimizes imaging allowing more focus on the patient
 - In B-mode, TAI fine tunes multiple parameters to provide the best possible image quality
 - In Doppler, TAI automatically adjusts for flow state providing improved continuity, border detection and fill-in

The Virtue of Value

- Musculoskeletal
- Anesthesia
- Emergency Medicine
- Critical Care
- Interventional Radiology
- Pain Management
- Rheumatology
- Surgery
